

Questions Which course are you most excited for in your degree? Which course have you enjoyed the most so far?

So far the course I am most excited for is energy systems as it directly correlates to the internship I have done over the past 2 years. I am also excited for microcontrollers. The course that I have most enjoyed so far is either EMag or Thermodynamics. It is really cool how electricity and energy can be manipulated.

Leave any feedback on the clarity of the expectations, instructions, and deliverables. I am still not entirely clear on the deliverables for this lab when it comes to the report you wanted but I think it is clear for future labs what you expect and what I need to do
